

WABASH SHAFT GO DEEP

Directors Decide to Send it Down Another 600 Feet.

STRIKE IN THE OLD HICKORY

FULL BREAST OF HIGH-GRADE ORE IN NEW TUNNEL.

AT THE meeting of the board of directors of the Wabash Mining company, held yesterday afternoon, business of great importance to the mine and camp was transacted. Among other things, a decision was reached to pound the shaft down another 600 feet at once, and the work will be inaugurated during the next few weeks. This decision was arrived at following the inspection of the mine by President Newcomb and Walter W. Wishon, superintendent of John A. Creighton's famous Speculator property in Montana, who is one of the Wabash directors.

It was also announced after the meeting that the real purpose of the visit of Robert Bell, the state mining engineer-elect of Idaho, to Park City, was to study conditions at the Wabash and other mines of the camp in the interests of and for the Wabash company. Mr. Bell was in attendance at the directors' meeting, and the big bodies shown me carried the values they were represented to have, and so I quietly "pinched" a few samples and then, as he called them, went into gold and silver in silver to the ton, and I was convinced, as there is an immense quantity of that kind of ore.

Colonel Treweek, in discussing conditions at the property after the meeting, said that he would be no strike title report, he could say that two veins had been opened in the mine and that ore was exposed in two places, all of 600 feet apart.

"We don't claim to have a solid body of it," said he, "but the showing is such that we have no fears for the future."

He exhibited samples of some of the finest looking ore of which the camp is capable, remarking that it assayed 15 ounces silver, 14 per cent lead and \$1.60 in gold per ton. That additional depth might be required to get the ore bodies in place he admitted, but that the world to doubt, he had no reason in the world to doubt.

"We are not working any stock-jobbing scheme," concluded the colonel, "and while we are developing the mine the stock market must take care of itself."

WEEKEND INCORPORATED.

Governor-elect Sparks of Nevada Forms Company.

Governor-elect John Sparks of Nevada yesterday completed the papers for the incorporation in Utah of his famous Weekend mine. Having finished his business here, he left last night for Reno.

"I came to Utah to incorporate because I was advised to do so by my attorney," explained Mr. Sparks, "and I found there were so many advantages to be gained that I made up my mind to do so, although I am just as loyal to Nevada as I am to Utah."

The company, which is a close corporation known as the Sparks Mining company, is capitalized at \$100,000, divided into shares of \$100 each. Mr. Sparks holds 99,500 shares. The rest is divided among the following incorporators: Mrs. Nancy Elmore Sparks of Reno, Nev., wife of Mrs. Maude Mackenzie of San Francisco, his daughter, Judge O. W. Powers of Salt Lake, C. Ira Tuttle of Salt Lake and A. E. Cheney of Reno, Nev.

The property owned by the new corporation is the Weekend mine, near Reno. A vast amount of rich ore has been discovered, running from fifty to 3,000 ounces in silver and 10 per cent of the precious metals being gold. This makes the values run from \$125.50 to \$7,500 a ton.

The mill now on the ground is treating thirty tons a day by a hypo-leaching process, the ore being first roasted. The rolls are capable of crushing 140 tons a day, and the capacity of the mill will be increased. The ore has been found in paying quantities practically from the surface. The shaft is down 140 feet and inclines have been run ninety feet further in ore.

A shipment of two cars of rich sulphide and chloride ore from the Desert King side of the property is now on its way to the Salt Lake smelters, the mill being incapable of handling the entire output.

STRIKE IN OLD HICKORY.

New Tunnel Breaks Into Full Breast of High-Grade Ore.

President A. B. Lewis was in receipt of most welcome news from Manager Farish of the Old Hickory mine yesterday afternoon. Mr. Farish telephoned up that he had just encountered a full breast of ore in the tunnel being run from the Old Hickory mine, designed to tap the new double-compartment working shaft at considerable depth. He said the ore would prove to be very rich, as it was laced through with streaks of red oxide of copper that looked finer than anything previously found in the workings of that remarkable block of mineral-bearing territory.

The discovery was made much sooner than anticipated, though it was known, of course, that the monster mineral bodies disclosed in the upper workings would be tapped before the tunnel had been run any great distance. The significance of the strike tests in the fact that the ore was turning out to be high-grade, rather than the 10 or 12 per cent average that the upper workings indicated would prevail. It now became a question of how every property owned by the company would develop surprise after surprise, until the management itself would become bewildered by the changes.

Mentioning the Imperial, Mr. Lewis said that the contractors were pushing the tunnel in at the rate of four and one-half feet a day, with the face looking most encouraging. The work will be registered there before very long. The recent storm deposited one foot of snow down around Milford and Frisco, and the prospects for lots of water during the next summer are most encouraging.

BACK FROM DUGWAY.

Visitors to the Western Camp Return Well Pleased With Their Trip.

Messrs. George L. Moats and T. E. Bird, managers of the Four Metals and Dewey companies' mines, respectively, returned from a week's trip to those dugway district propositions yesterday, accompanied by the eastern talent that came out to make an inspection of the properties of that rapidly growing camp. In the party was J. H. Jacobson, a wealthy resident of Meridian, Neb., who was previously interested in the Four Metals company, and so well pleased was he with his investigations that he declared his intention of adding materially to his holdings. He confessed that he had not only been

deceived by the representations that had previously been made to him, but declared that the half had never been told. During the afternoon he and other members of the visiting party were taken down the valley to see the big smelters within the next few hours they will leave for home again. The Dewey company's property also came in for a full share of the visitors' attention. Mr. Lewis is no longer any doubt that the management will secure all the assistance necessary to bring that promising property to the front. Also, in fact, arrangements have already been concluded for the erection of new buildings and the adequate equipment of the mine to open it at day's notice, and spring will see great changes wrought at that and other properties in the same district.

The visitors report that every man in the camp owning a pick and shovel is now at work, either prospecting or developing his holdings, and a better feeling prevails than at any time in the past.

WILL MAKE A BIG MINE.

Robert Bell's Opinion of the American Flag Property.

Robert Bell, the newly elected mine inspector of Idaho, has returned to Salt Lake from Park City, where he was spending some time studying the geology of the camp. Mr. Bell was called into consultation by one of the companies in the camp with reference to the benefit of his expert knowledge, and while there he visited several mines, including the American Flag and the Wabash.

There is no question that the American Flag will be one of the big mines of Park City," he declared. "I was all through the property, and it certainly is a wonderful showing. I could scarcely believe that the big bodies shown me carried the values they were represented to have, and so I quietly 'pinched' a few samples and then, as he called them, went into gold and silver in silver to the ton, and I was convinced, as there is an immense quantity of that kind of ore."

Colonel Treweek, in discussing conditions at the property after the meeting, said that he would be no strike title report, he could say that two veins had been opened in the mine and that ore was exposed in two places, all of 600 feet apart.

STOCKTON PROPERTY BONDED.

W. J. Lawrence Secures the Mitchener Ground Adjoining the Honerine.

On Thursday afternoon W. J. Lawrence secured fifteen months' lease and bond on the Mitchener claims at Stockton, the initial payment of \$100 being paid over to Mrs. Mitchell, and a bond for the value of the property was signed. The ground consists of two claims lying between the Honerine and the Calumet & Hecla.

Mr. Lawrence has been prospecting up there now. It is only a little further compared with the real boom which, with ordinary prosperous times, is sure to come within a year.

ORE AND BULLION.

Ore and bullion settlements in this city yesterday, as reported by McCormick & Co., amounted to \$30,400, as follows: Silver, lead, gold and copper ore, \$25,700; base bullion, \$2,700.

METAL MARKET.

Silver, 45¢ cents per ounce. Copper, 10¢ cents per pound; New York, \$11.25 to \$11.50 per 100 pounds; New York, \$11.25.

MINING STOCK EXCHANGE.

The Bears Were Routed Yesterday and Lively Trading Resulted.

The bears were routed yesterday and lively trading resulted. The Excelsior of Eureka, Nev., will contribute two cars of ore to today's market. The Bullion-Beck and Mammoth will each have six cars of fine ore on today's market.

REMARKABLE SUCCESS

Of a New Catarrh Cure.

A large and constantly increasing majority of the American people are catarrh sufferers. This is not entirely due to our carelessness and neglect, but because modern investigation has clearly proven that many diseases, known by other names, are really catarrhs. Although they may be called by different names, they are all applied almost exclusively to the common nasal catarrh, but the throat, stomach, liver, bladder, kidneys and intestines are subject to catarrhal diseases as well as the nasal passages. In fact, wherever there is mucous membrane there is a feeding ground for catarrh.

The usual remedies, inhalers, sprays, douches or powders, have been practically failures, as far as anything more than temporary relief was concerned, because they simply dry up the mucous secretions, without having the remotest effect upon the blood and liver, which are the real sources of catarrhal diseases.

It has been known for some years that the radical cure of catarrh could never come from local applications, but from the internal system, and the blood and expelling the catarrhal poison from the system.

A new internal preparation which has been made by the use of short time has met with remarkable success as a genuine, radical cure for catarrh. It may be found in any drug store, under the name of Stuart's Catarrh Tablets, large, pleasant tasting lozenges, composed principally of anti-septic ingredients, blood root, red gum and similar catarrh remedies.

Dr. Ainslie, in speaking of the new catarrh cure, says: "I have tried the new catarrh remedy, Stuart's Catarrh Tablets, upon thirty or forty patients with remarkable success. The results they clear the head and throat more effectively and lastingly than any douch or inhaler that I have ever seen. Under the name of Stuart's Catarrh Tablets, large, pleasant tasting lozenges, composed principally of anti-septic ingredients, blood root, red gum and similar catarrh remedies."

Any sufferer from nasal catarrh, throat or bronchitis, or avert of the stomach, liver or bladder, will find Stuart's Catarrh Tablets remarkably effective, pleasant and convenient, and your druggist will tell you they are absolutely free from any injurious drug.

and other interested parties will go out to the Park tomorrow to witness the starting of the new hoisting plant at the Stockton. Chief Engineer W. J. Lawrence says the active mining of ore will follow the starting of the hoist, and during the winter the property will be crowded development work, to produce a nice tonnage of high-grade ore.

Manager George Moore of the Stockton reported that the shaft in that property had been opened and that operations were being carried on. The shaft was 100 feet deep, and the material having been its appearance at the point in the shaft where the eye-in-the-hole was being worked. The shaft was 100 feet deep, and the material having been its appearance at the point in the shaft where the eye-in-the-hole was being worked.

R. M. Keen and Briant S. Young of Richfield left for New York and Boston this morning, on a business trip. They are on a tour of inspection of the properties in the Gold Mountain mining district. They are on a tour of inspection of the properties in the Gold Mountain mining district.

Bonds sympathized with the rise in stocks. Total sales, par value, \$2,500,000. Bonds and stocks were sold at a profit of 4 1/2 per cent on the last call.

KEEP YOUR HEAD UNCOVERED.

The Constant Wearing of a Hat Propagates Dandruff Germs.

There are many men who wear their hats for the sake of the weather, and are blessed with a heavy coating of hair, yet if the scalp of these same men is not kept clean, the hair will fall out, and the scalp will become itchy and red. The scalp is the seat of the hair, and if it is not kept clean, the hair will fall out, and the scalp will become itchy and red.

NO NEW LIGHT SHED

UPON PARIS MYSTERY

Paris, Nov. 21.—Consul General Gowdy's investigation into the shooting of Mrs. Ellen Gore Wednesday develops the fact that Mrs. Gore was a pupil of the famous composer Moszkowski. Her maiden name was Sinclair. She was originally from California, where she married Tom Gore of British Columbia, and he moved to Mexico City and became wealthy. They built an extensive apartment house in Mexico City which they called "Gore Court."

Tom Gore, the Russian singer, in whose apartments Mrs. Gore was killed, is supposed to be related to Major General Rydzewski, attached to the staff of the Russian czar.

The police are continuing the investigation and have designated Gastine Remette, the expert armorer, to give an opinion on the wound. Whether it was self-inflicted, Dr. Soquet has made an autopsy and transmitted his report to the police, but it is said it contains no new developments.

TIME MONEY WAS EASIER

Stock Market Was a Trifle Better Yesterday.

BANKERS CAME TO RESCUE

SHORTS WERE RUN TO COVER ON THE COPPER PROPOSITION.

New York, Nov. 21.—The marked improvement shown by today's stock market was due in a great measure to the greater ease of money. There was no real reduction in the rate, but the willingness of the money market to lend for long periods was a great relief to the financial condition of the country. The market was a trifle better yesterday, and the leading futures, closing at 4 1/2 per cent, were 1/4 per cent lower at 4 1/4 per cent.

The market was a trifle better yesterday, and the leading futures, closing at 4 1/2 per cent, were 1/4 per cent lower at 4 1/4 per cent.
